Wired Earbuds with Multi-Tips

Uncertain if your customer has a phone with a 3.5mm input, Apple iOS input, or Micro USB input? With the Wired Earbuds with Multi-Tips you don't have to worry. These earbuds are compatible with the newest iPhones, Motorola devices, Samsung S9, and other major phone brands.

How It Works:

These earbuds feature three tips for listening to audio: the traditional 3.5mm Aux Output, Apple iOS output, and a Micro USB Output. For users that have a device with the traditional 3.5mm input, all the user needs to do to enjoy audio is simply plug the 3.5mm tip into their device. If the user has a phone that does not have a 3.5mm input but an Apple iOS or Micro USB input, they will need to connect by Bluetooth® in addition to plugging in the cable. For example if the user has an iPhone 8 or above the user will need to plug in the Apple iOS tip to stream audio. Once the earbuds are plugged into the device with the Apple iOS tip, the user will need to connect to the earbuds through Bluetooth. The pairing name "Wired Earbuds" will appear under your Bluetooth settings. Once selected you can stream audio through your new earbuds!

Product Features:

- Playback Time: Unlimited
- Includes: 3.5m Aux output, MFi output, and Micro USB output
- Available in: Black, White, Royal, & Red
